

I am a customer and great supporter of XM satellite radio. They offer a valuable service not available through normal publick radio channels. They should have the right to offer weather, traffic, and other type of services on a local level -- not jus national. Please don't let the National Association of Broadcasters influence your decision on what services XM can offer based upon their fear of the added competition.
Please reject NAB's petition 04-160. Thanks.

Gregory Green
